Water lens changing words.

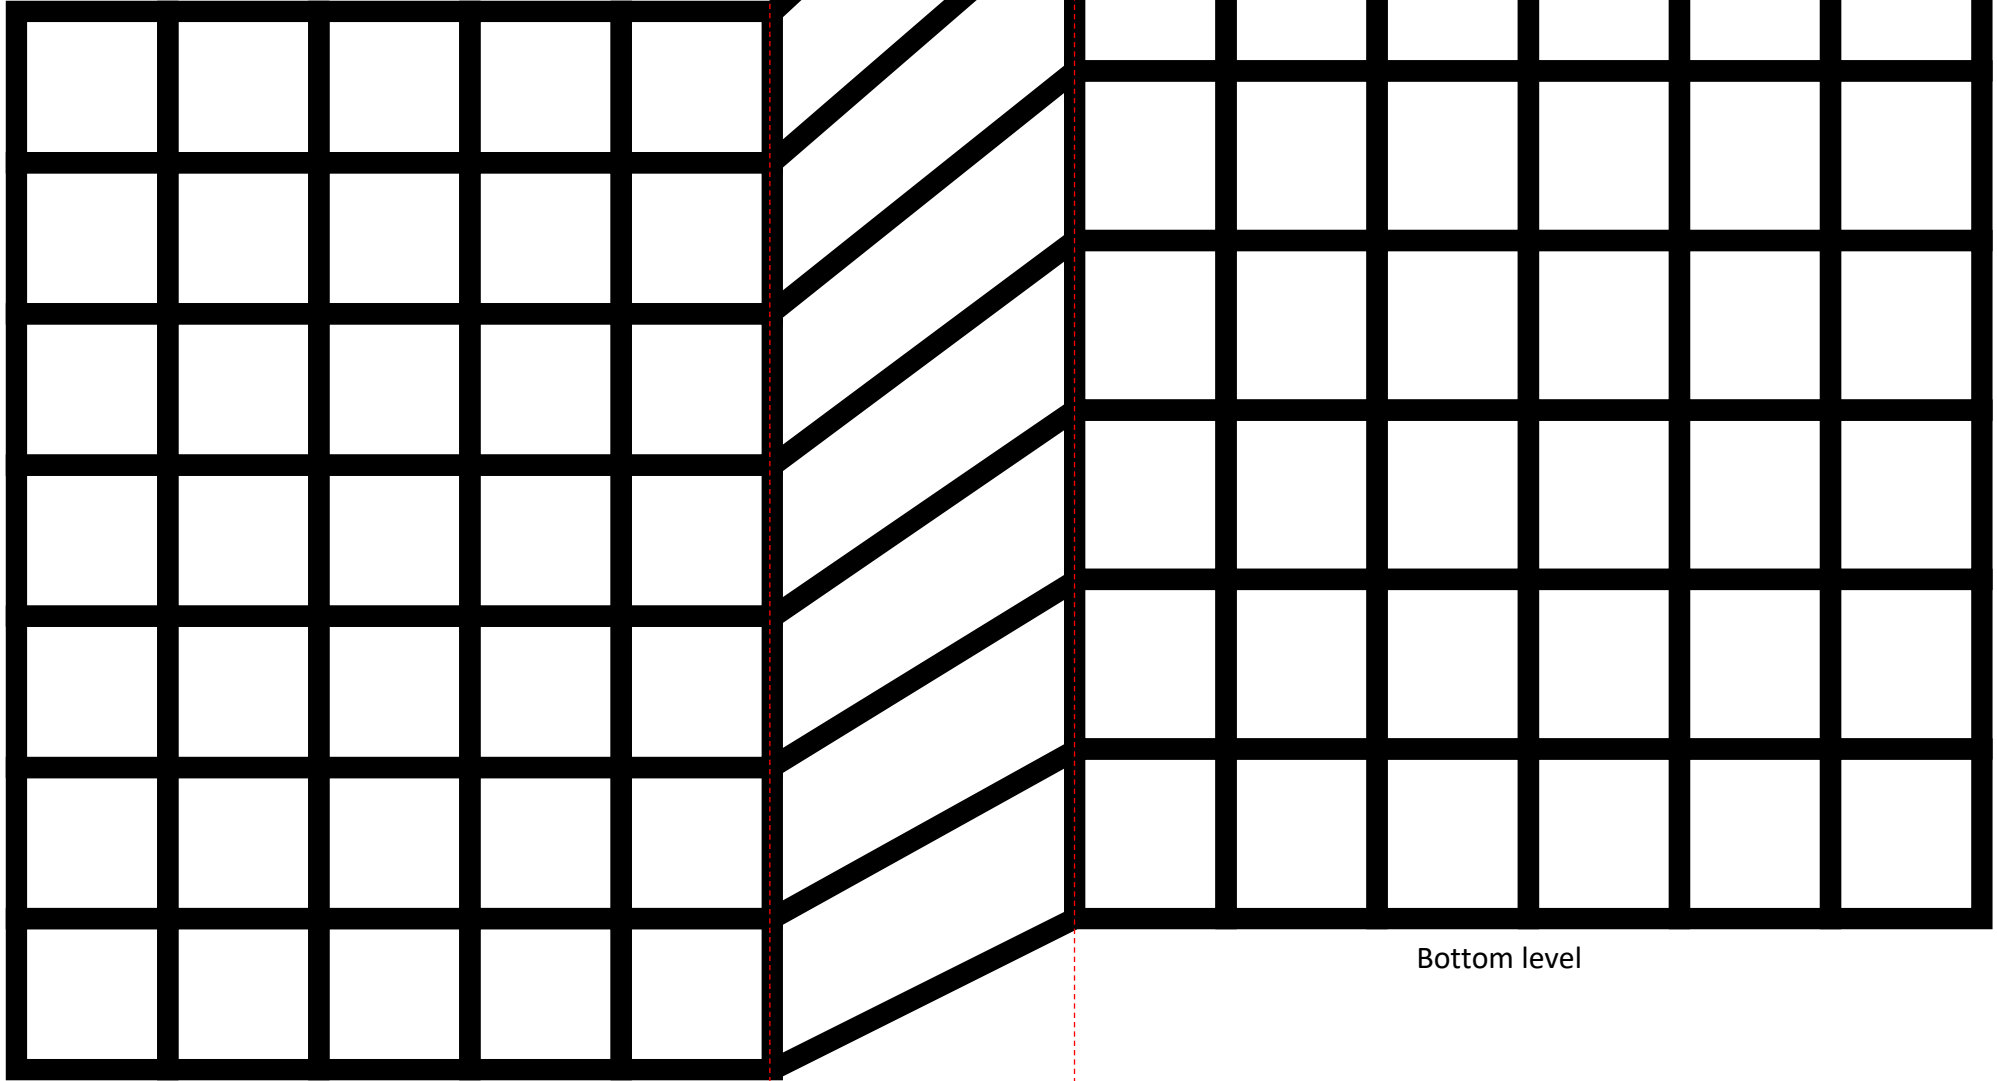

1. Cut each of these rectangles out and stick to the back of a glass or bottle filled with water.
2. Line the glasses up to create the words CURIOUS and WONDER depending on which angle you're viewing at.

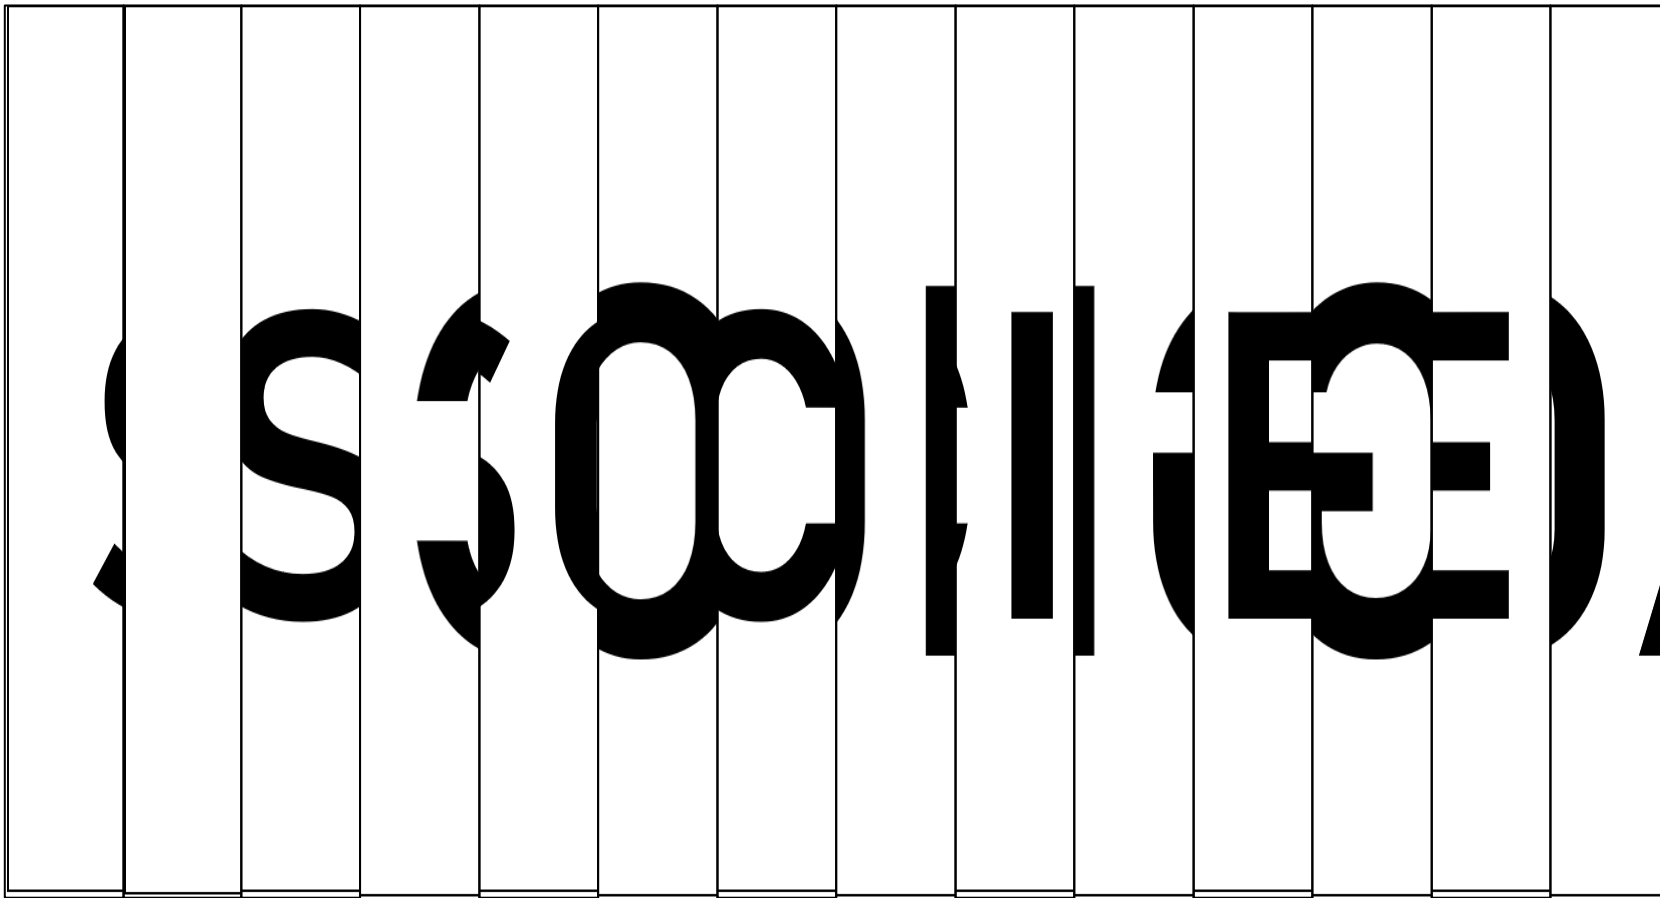

Two level camouflage

1. Print on card. Cut out the shape and colour in a checker pattern
2. Fold along the two dotted lines to create a step. The smaller squares are on the top level. The central region should be vertical. Support the top level so it stays flat.
3. If you want, you can cut out some of the central region to make a hole for any vanished objects to roll through and out the back.

Template created by Matt Pritchard @sciencemagician

↑
Stick the other sheet to the back of this last rectangle.
↑

Concertina words.

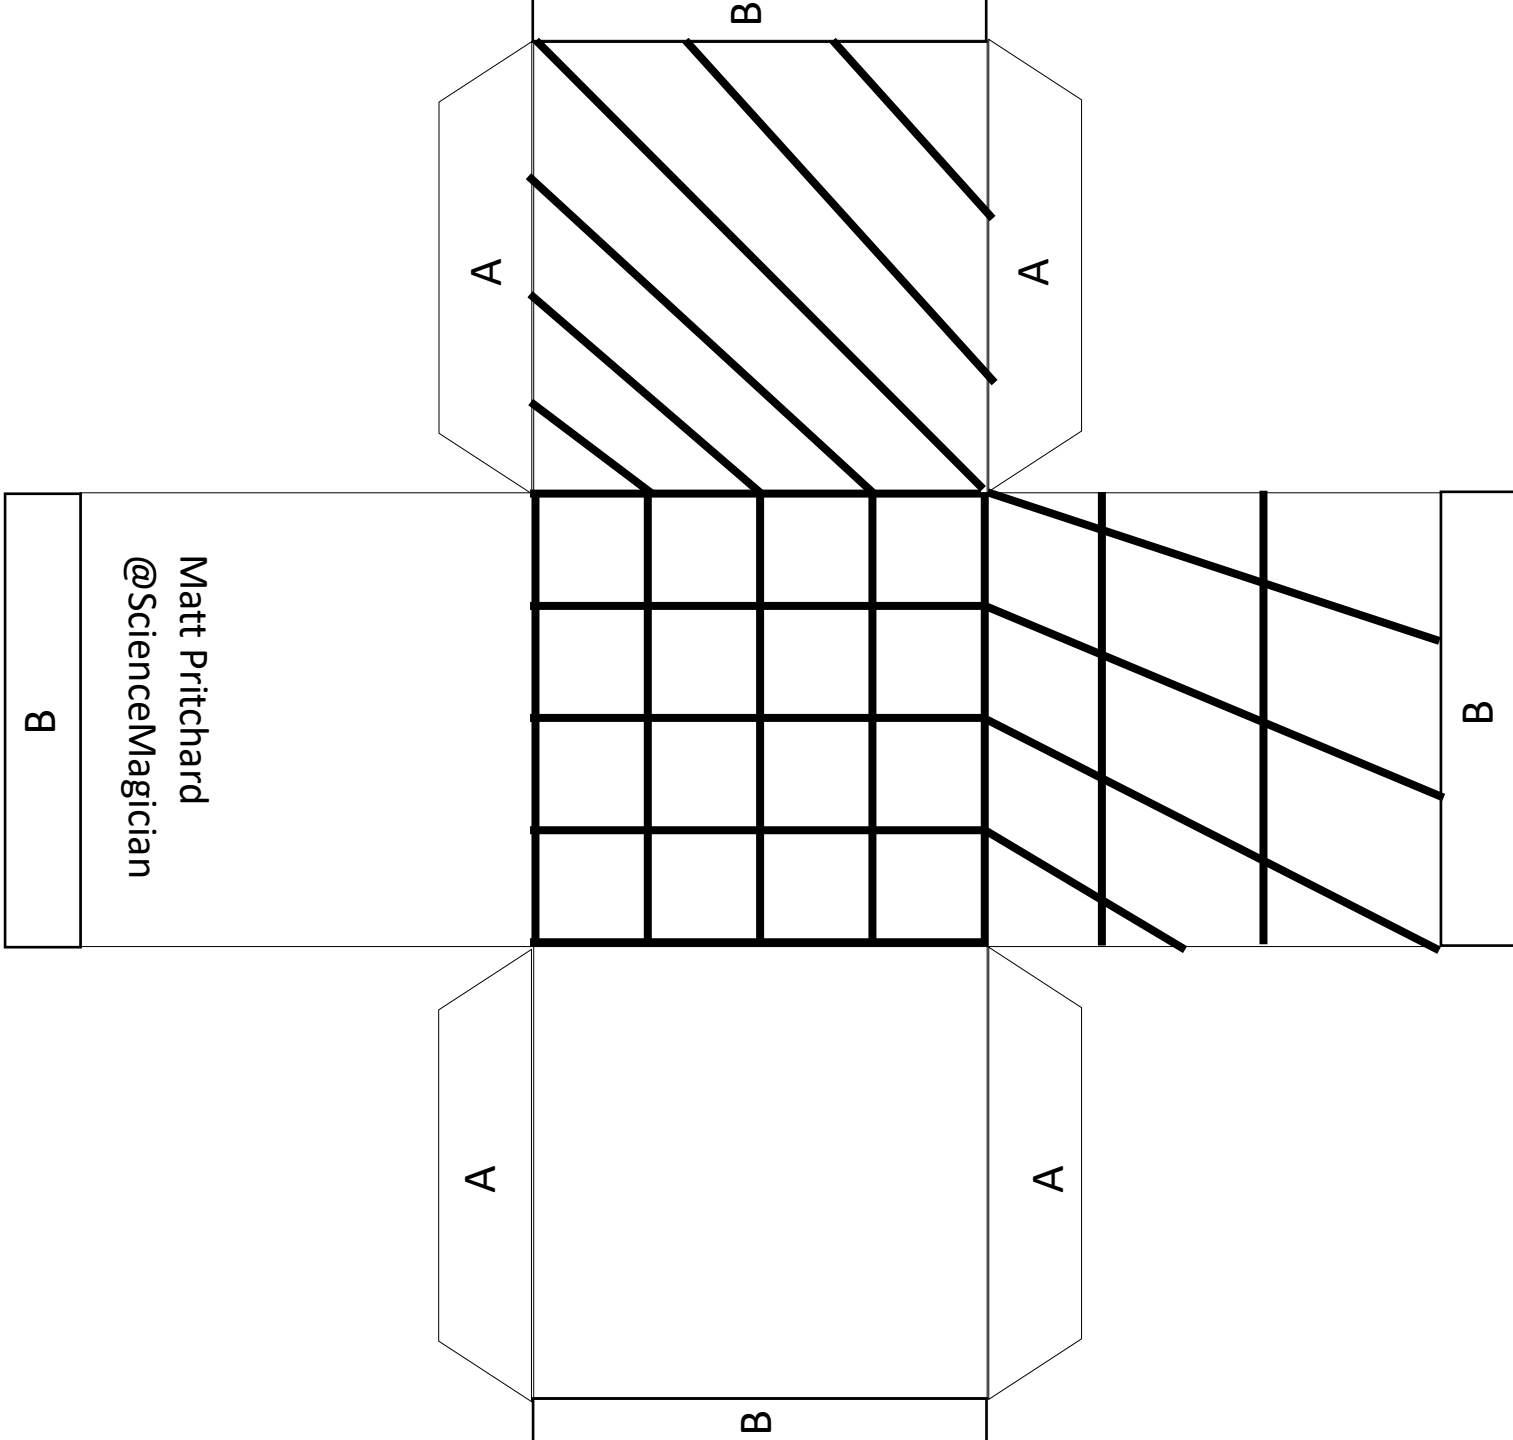

1. Cut out the two large rectangles.
2. Glue the two together where shown.
3. Fold along the strips to create a stair case shape so you can view the word SCIENCE
4. Put a mirror at the right end to see MAGIC in the reflection.

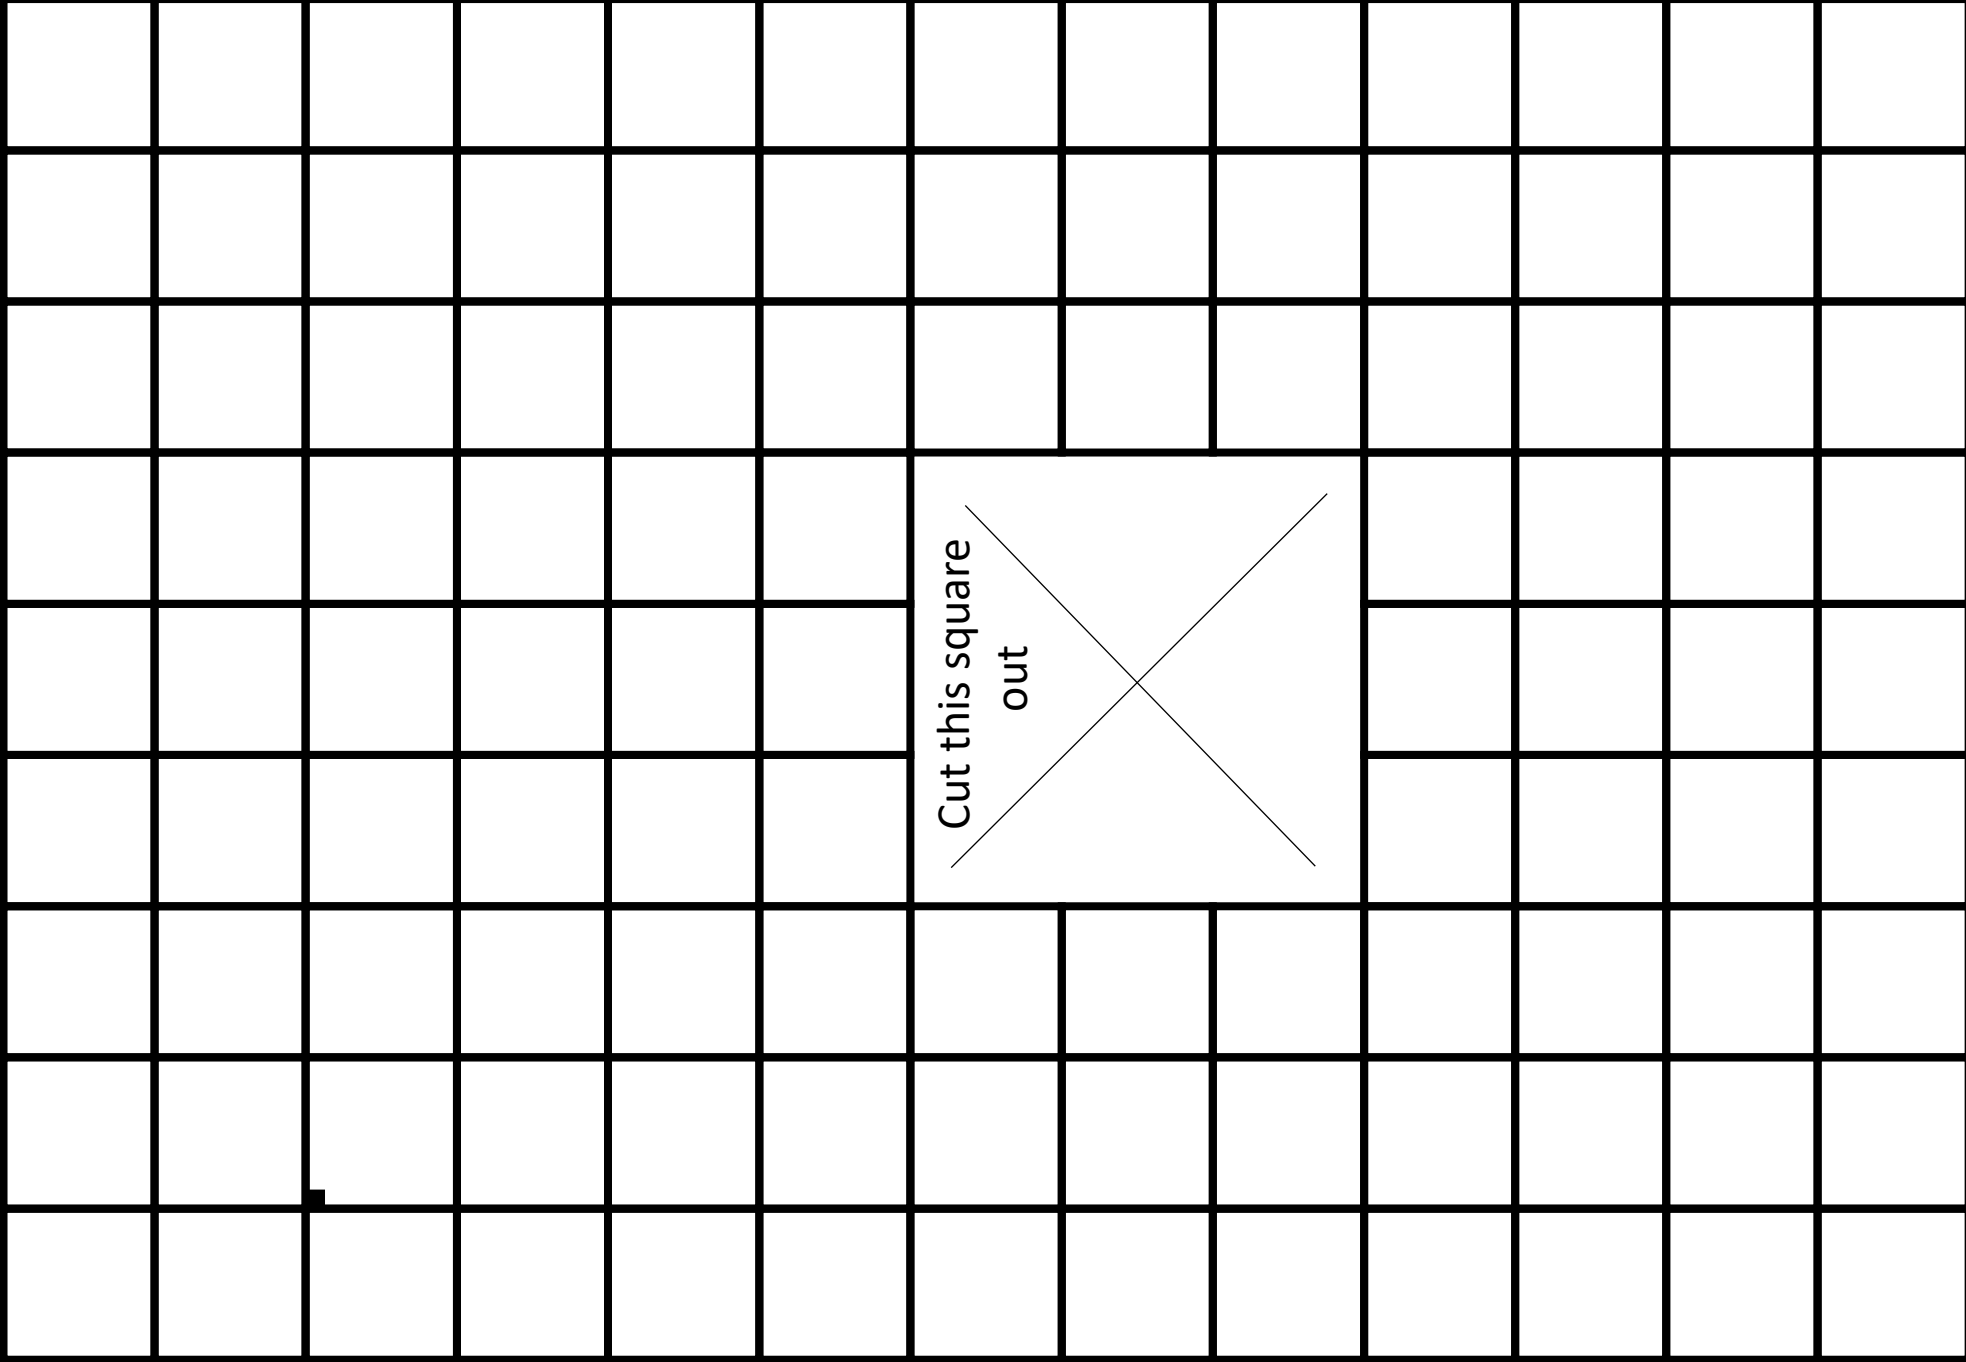

Apply glue here and stick to the other sheet.

MAKING ME

Instructions

1. Print out the two sheets on white cardboard
2. Cut the 3x3 square hole out of the checker board base sheet.
3. Assemble the cube by sticking the **A** edges to the inside faces.
4. Insert the **B** tabs of the cube into the hole in the base board. Bend them back and stick them down to the underside of the base board.
5. Line the camera up so the discreetly marked square in the top left corner of the base board is just hidden. .
